Clear view for glasses

Compact Glasswashing Machine PALUX GLE-T with new operating concept

The compact PALUX GLE-T Glasswashing Machine gives the most sensitive dishes, the glasses, a clear view. It can be integrated into any counter or bar area as required and works extremely hygienically and economically. The new operating concept optimises the visual representation of the operating status via a large, multi-colour LCD display.

The PALUX GLE-T Glasswashing Machine can be installed in every counter and bar area and is suitable for all glass shapes: With a glass insertion height of 300 mm and a basket size of 400 x 400 mm, even tall glasses can be easily inserted. With three standard washing programmes of 90, 120 and 150 seconds, the PALUX GLE-T achieves an output of up to 40 baskets per hour. Six special programmes meet customer-specific requirements: a water change programme, a self-cleaning programme, a special programme for small dishes, a cold rinsing programme and a programme for the use of osmosis systems. In addition, the tank water is automatically renewed.

Optimised operating concept

With the new operating concept, the PALUX GLE-T now shows the respective operating status even better on the clear display: The large, multi-coloured LCD display shows whether the machine is currently heating up, rinsing or ready for operation and how long the rinsing process will last. The start button starts the rinsing programme and a signal tone sounds at the end. The GLE-T works particularly effectively thanks to the comprehensive washing and rinsing system: the special fine filter system permanently filters the detergent, dirt particles are pumped out parallel to the washing cycle. A device for rinse aid dosing and detergent dosing as well as a rinse aid pump and lye pump are fitted as standard. The rinsing system with a constantly high rinse temperature and a water consumption of only 1.5 litres per standard washing programme saves up to 30 percent water, energy and detergent.

PRESS RELEASE

Low-noise and hygienic

The all-round double-walled casing is an important advantage, especially in the counter area, as it reduces the noise level and heat radiation. The spring-loaded door allows it to be opened up to 40 percent easier. Thanks to the use of special baskets, the glasses always remain in the ideal position during the rinsing process. The seamlessly deep-drawn tank interior and the basket guides integrated into the interior are particularly easy to clean. The dual wash arm made of composite can be easily removed and cleaned using a click system. The practical self-cleaning programme also keeps the glasswashing machine hygienically clean.
